

Cloud Callbox System

Smart Callbox System

Designed for Apartments, Condos, and Private Communities

The OwnerGo App for iPhone

Buzzbud Makes Door Access Management Easy

OwnerGo takes door access to the next level, with exclusive features and one-click resident on-boarding. You will find managing door access has never been easier. With a customizable menu, the Buzzbud callbox features an immersive experience for residents and visitors alike. Contact your dealer for more information on installing Buzzbud for your building!

Available Exclusively Through Dealers

Buzzbud Simplifies Door Access With Comprehensive Features

Buzzbud™ is the smart callbox system for your community which simplifies managing door entry. Give residents the seamless experience of access to all the features in our customizable portal, plus state of the art callbox features which let your residents interact with visitors.

Standard Features

Solid Construction

Our optional aluminum mount will securely attach the callbox to the outside of your building.

Interactive Touchscreen

Our intuitive touchscreen offers an easy to use, immersive experience for Visitors.

Customized For Your Building

Your property manager can easily log into their account and update the buttons, photos, and information sections.

Carrier Onboarding

We'll take care of vetting new route carriers who visit the callbox without a package delivery passcode. UPS, USPS, Amazon, DHL, and FEDEX carriers must be wearing a uniform to be given a passcode.

HD Video Recording

When paired with our cloud based camera solution, you can enable motion activated HD video recording of the area in front of the callbox when the callbox is not being used.

Facial Recognition

If the community enables this feature, residents may opt-in to record their face in the callbox, allowing them to open the door just their face with our state-of-the-art AI technology.

Resident Onboarding

Onboarding residents is easy- just ask them to register using the OwnerGo app for iPhone or Android, and the property manager approves the registration.

External Access System Compatible

Plug your existing Weigand compatible card reader into Buzzbud to allow external card reads to correlate with camera footage.

Built-in Surveillance

Each callbox can store up to 5 months worth of motion triggered images of people walking past and using the callbox, plus door access events. (storage varies depending on volume of pictures)

IP66 Waterproof

Our callbox is designed for nearly all environments.

Dynamic Schedules

Each customized component on the touchscreen can be scheduled to show at different times of day and days of the week.

No Phone Line

Our callboxes use the Internet to contact your residents. Use your existing Ethernet, WIFI, or optional external 4G cellular connection.

Easy Install

Our surface mount model can be installed in as little as 30 minutes, with power supplied by included 12V/2A AC adapter.

Access Cards

Our access card module supports a variety of 13.56Mhz cards (ISO14443 Type A/B, ISO18092 compliant)

Simple Pricing

No hidden fees! Residents do not pay any fees to use the intercom. Communities are billed one low monthly rate.

Realtime Monitoring

From our cloud based access control panel, employees can view real time events with images as they occur for all your callboxes. Our optional cloud based footage storage allows quick and reliable access to your camera footage from the cloud.

Package Management

Package Carriers can enter each resident's package in the callbox before placing packages inside to notify residents.

PIN Access

There are several options to allow residents and visitors to access the building using a PIN, including revolving monthly PINS, static PINS, and temporary PINS which residents can generate for visitors.

		All configuration of the callbox is done on the OwnerGo website, so it is easy and secure to configure the callbox, plus we automatically update the callbox software when a new version is available.	Our software is designed to work with multiple callboxes in a community, allowing you to designate units and residents in separate buildings and 'security levels'.
